

The Last of Their Kind

- Over 3 Million Acres Lost - 75% of Their Range

*In 1980, at the time of passage of the
California Desert Conservation Area Plan,
there were 19 recognized Herds Areas, 2,747 wild burros
on 3,500,465 acres within the Conservation Area alone.*

Today
California Has 3 Remaining Herds - 2 Live On Less Than 300,000 Acres
With only 345 burros or less.

Please Help Me!

Cornelius

A Clark Mountain Burro and one of the last of his kind.
After two hundred years of history, the Clark Mountain burros were recognized as the most genetically unique burros in America. Most of his herd now sits in holding pens and in less than two weeks, will be processed for adoption or sold unconditionally and disappear

Forever

We have everything it takes to stop this except funding.
Please take a STAND and help fight to preserve the last of their kind.

Sending your tax-deductible donation NOW to:

*Public Lands for the People
3700 Santa Carlotta Street
La Crescent, CA 91214-1048*
